Key Findings

The October 2026 Franklin & Marshall College Poll finds that Pennsylvania's registered voters are deeply concerned about their personal finances and similarly dissatisfied with President Trump's performance. Voters say the economy (32%) is the most important problem facing the state, and this is the top concern of every partisan group. Among those who mention economic problems, Democrats lead Republicans as the party that can best handle the issue, 46% to 21%. Nearly half (45%) of respondents say they are "worse off" financially than a year ago.

Almost nine in ten (85%) registered voters say they are "certain" to vote in the upcoming election, although only about half (56%) of them say they are "very interested" in the 2026 races. Democrats (63%) are currently more likely than Republicans (55%) to say they are "very interested" in the upcoming elections.

Governor Shapiro's job approval ratings are positive considering how much economic pessimism voters currently express. Slightly fewer voters believe he is doing an "excellent" or "good" job (44%) as governor as believe he is doing a "fair" or "poor" job (48%). The race for governor has changed little since June, with Governor Shapiro leading his Republican challenger, Stacy Garrity, 59% to 36%, among likely voters in the 2026 governor's race.

Governor Shapiro's advantage in the gubernatorial race is a result of both the general positive views that voters have of him and the relative anonymity of his Republican challenger, Stacy Garrity—two in five (42%) voters say they do not know enough about her to have an opinion. Shapiro is viewed more favorably (53%) than unfavorably (33%) among the state's voters, while Garrity is viewed more unfavorably (35%) than favorably (22%).

Fewer voters believe President Trump is doing an "excellent" or "good" job (29%) as president than believe he is doing a "fair" or "poor" job (70%), which is a sizable decline since our October 2025 poll when his positive approval rating was 41%. Only one in three (37%) registered voters believe that the President's policies have helped them personally. Democrats currently lead Republicans by 14 points among likely voters, 56% to 42%, in their preferences for the US House of Representatives.

Many voters express concerns about the integrity of the upcoming election, although those concerns differ by partisanship. Two thirds (65%) of registered voters are concerned that the postal service will fail to deliver mail-in ballots on time to be counted, half (52%) are concerned about widespread voter fraud, and two in five are concerned that non-citizens will vote (45%) and that federal agents will show up at polling places (44%). Democrats are more concerned about federal agents appearing at polling places, while Republicans are more concerned about voter fraud and non-citizen voting.

Detailed Findings

Direction of State and Personal Finances

More registered voters believe the state is "on the wrong track" (48%) than believe it is "headed in the right direction" (37%). The last time a majority of registered voters believed the state was headed in the right direction was January 2020. Nearly half (45%) of respondents say they are "worse off" financially than a year ago, an increase from two in five (36%) respondents in the October 2025 F&M Poll and similar to the August poll (44%). More than half of Democrats and independent voters say they are "worse off" financially than last year, as do 33% of Republicans (see Table A-1). More voters expect to be "worse off" financially next year (32%) than expect to be "better off" (20%), which is a much more pessimistic assessment than in March,

prior to the war with Iran, and similar to August. Voters have been more pessimistic than optimistic about their personal financial circumstances since October 2020 (see Figure 1).

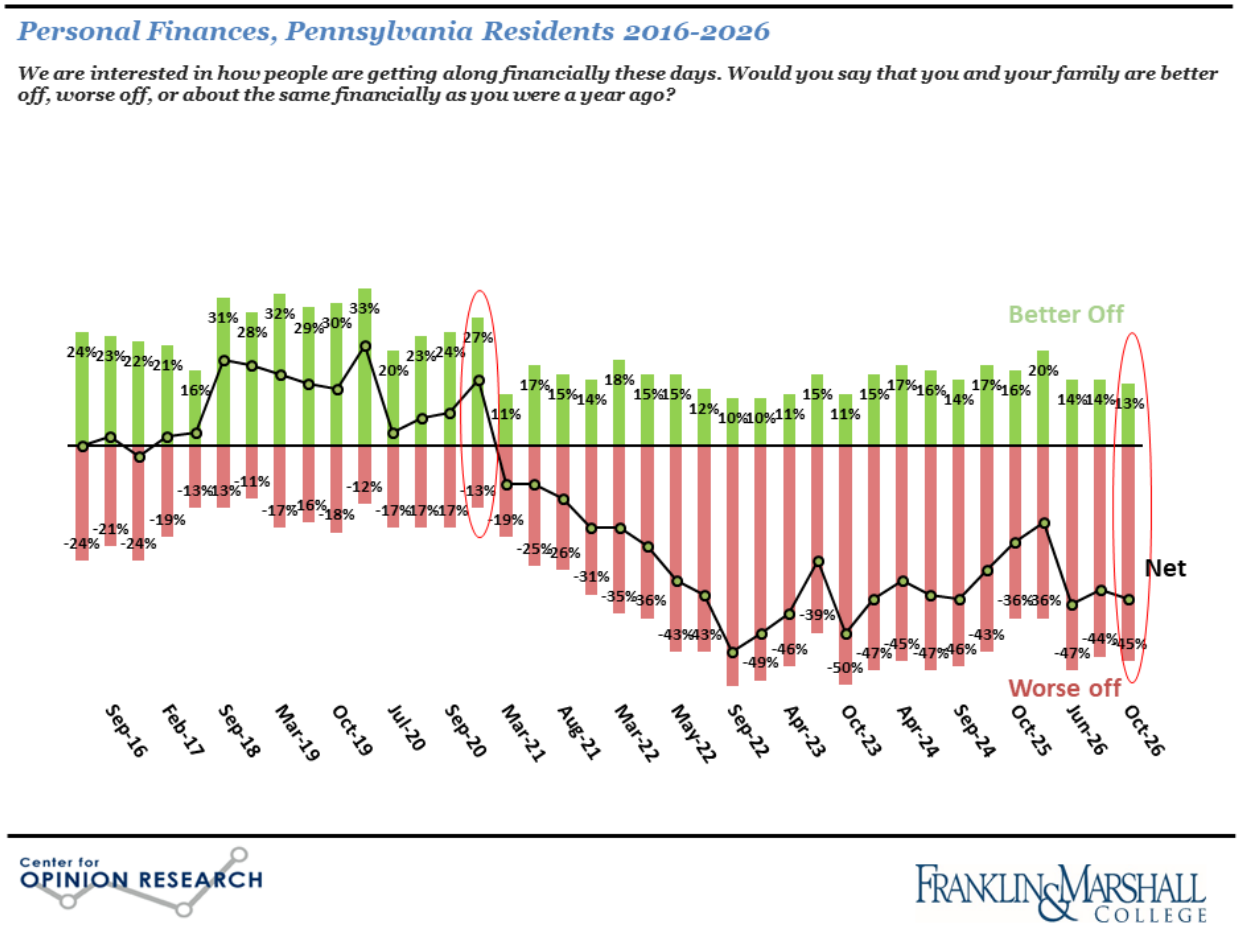

Figure 1. *This figure shows how Pennsylvania's registered voters assess their personal financial circumstances.*

Voters report that the economy (32%), including unemployment, housing and real estate costs, and higher gas and utility prices, is the most important problem facing the state. The economy is the top concern of every partisan group (Democrats (40%), independents (36%), Republicans (26%)). Concern about government and politics (15%), the top concern last October, is mentioned less often than the economy as the top problem. Among those who mention economic problems, Democrats lead Republicans as the party that can best handle the issue, 46% to 21%, which is a similar advantage Democrats had in August when it was 47% to 23%.

Voter Interest in the Midterm Elections

Almost nine in ten (85%) registered voters say they are "certain" to vote in the upcoming election, although only about half (56%) of them say they are "very interested" in the 2026 races. Democrats (63%) are currently more likely than Republicans (55%) to say they are "very interested" in the upcoming elections. These two items have been part of the F&M Poll's likely voter screen for more than two decades, and the combined responses have provided estimates of voter turnout comparable to the share of registered voters who actually voted (see Table 1). The current pool of likely voters includes about one in seven (13%) registered voters who did not vote in the 2024 presidential election. These voters are overwhelmingly supporting Democratic candidates for governor and US Congress. Overall, turnout in this election may be a bit lower than the two most recent midterms in the state.

Table 1. Estimates of Voter Interest and Registered Voter Turnout, F&M Polls 2004 - 2026

Year	Certain	Very Interested	Likely Voter Estimate	Actual Turnout	Turnout Miss
2004	92%	64%	59%	69%	-10%
2006	84%	56%	47%	49%	-2%
2008	90%	73%	66%	69%	-3%
2010	76%	42%	32%	47%	-15%
2012	93%	67%	62%	68%	-6%
2014	83%	47%	39%	42%	-3%
2016	93%	75%	70%	71%	-1%
2018	87%	71%	62%	59%	3%
2020	98%	77%	75%	77%	-2%
2022	90%	66%	59%	61%	-2%
2024	94%	75%	71%	77%	-6%
2026	85%	56%	55%	-	-

Note: 2004 - 2008 used RDD telephone samples; 2010 used RDD plus cell sample; 2012 - present used registered voter list samples.

State Politics

Governor Shapiro's job approval ratings are positive considering how much economic pessimism voters currently express. Slightly fewer voters believe he is doing an "excellent" or "good" job (44%) as governor as believe he is doing a "fair" or "poor" job (48%). Seven in ten Democrats, almost half of independents, and just one in six Republicans rate the governor's performance as "excellent" or "good" (see Table A-2). Governor Shapiro currently leads his Republican challenger, Stacy Garrity, 54% to 33% in the 2026 governor's race, which is consistent with the lead he held throughout the campaign. Shapiro's lead is similar among likely voters, 59% to 36%. Seven incumbent governors have sought reelection in Pennsylvania since 1968, and six of them have won. The average margin of victory for winning gubernatorial incumbents in Pennsylvania is 19 points.

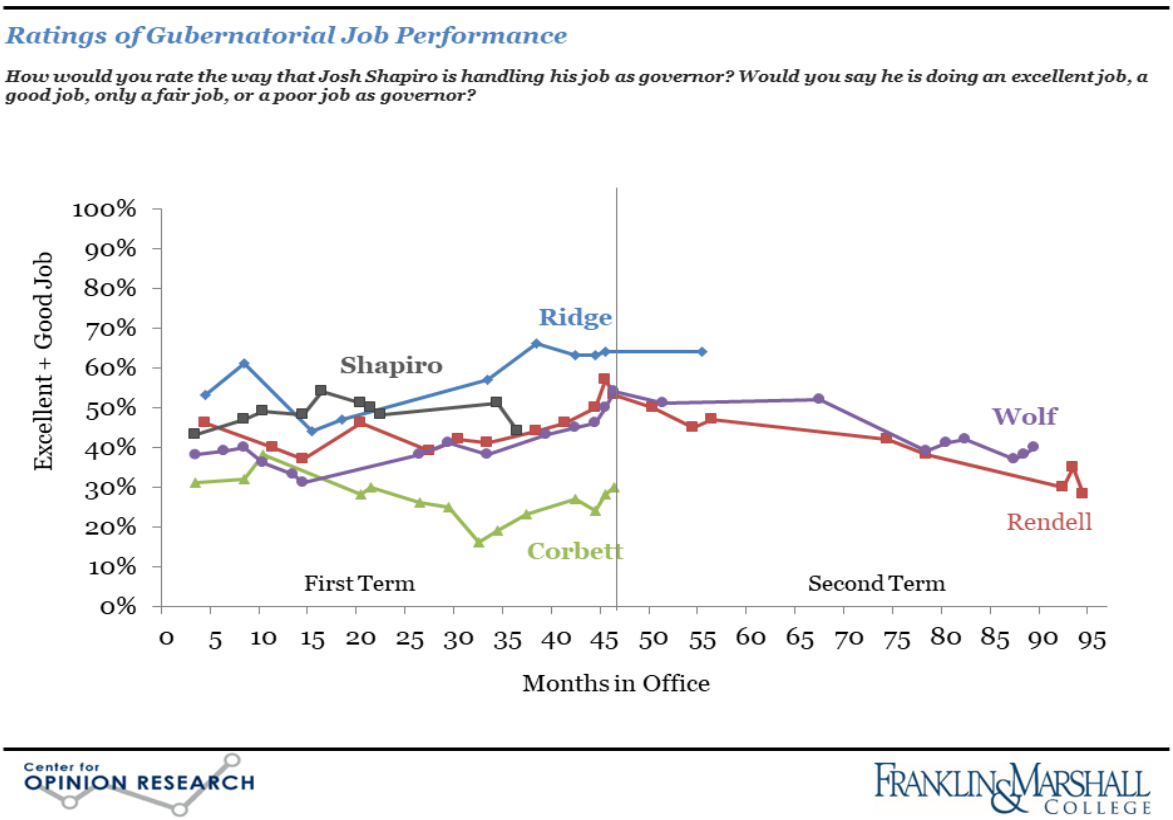

Figure 2. *This figure shows approval ratings among Pennsylvania registered voters for recent governors in relation to their months in office.*

Governor Shapiro's advantage in the gubernatorial race is a result of the general positive views that voters have of him and the relative anonymity of his Republican challenger, Stacy Garrity—two in five (42%) voters say they do not know enough about her to have an opinion. Only one in six voters (16%) say they do not know enough about Josh Shapiro to have an opinion. Shapiro is viewed more favorably (53%) than unfavorably (33%) among the state's voters, while Garrity is viewed more unfavorably (35%) than favorably (22%).

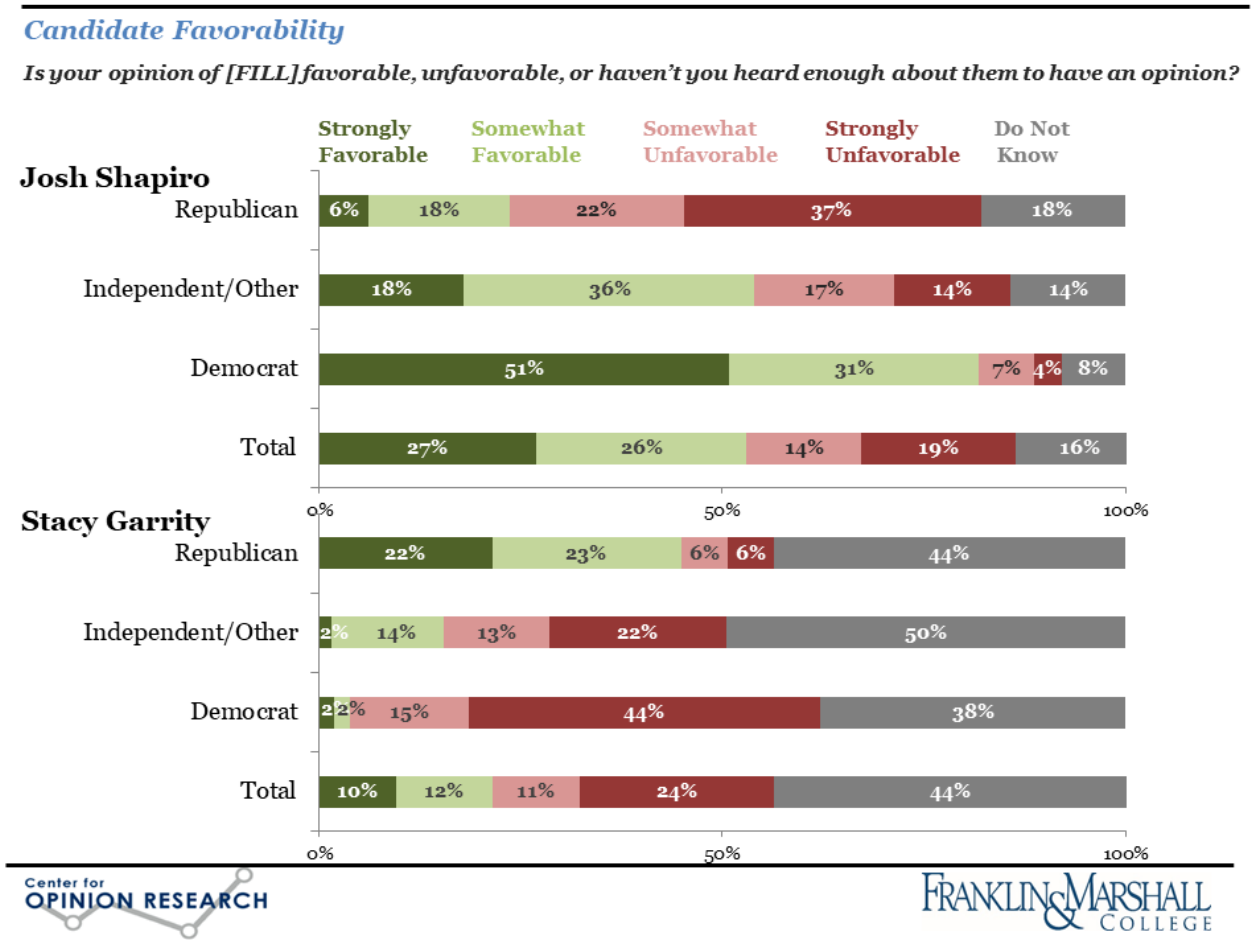

Figure 3. *Favorability ratings of Shapiro and Garrity by Party, October 2026.*

Flock Cameras, Vaccinations, and Election Integrity

The survey also included questions about contemporary issues related to flock cameras, vaccinations, and election integrity. The survey found that:

- More people believe that flock license plate cameras threaten civil liberties (61%) than believe they help solve crimes (32%). Majorities of Democrats (67%), independents (58%), and Republicans (54%) believe that flock cameras threaten civil liberties. Three in five (65%) registered voters oppose their use in local communities.
- Seven in ten (70%) registered voters believe the state should do more to encourage people to get vaccinated for communicable diseases, and four in five (80%) believe that vaccines are generally safe and effective. Republicans (49%) are less likely than Democrats (92%) or independents (72%) to think the state should be doing more to encourage vaccinations.
- Many voters express concerns about the integrity of the upcoming election, although those concerns differ by partisanship. Two thirds (65%) of registered voters are concerned that the postal service will fail to deliver mail-in ballots on time to be counted, half (52%) are concerned about widespread voter fraud, and two in five are concerned that non-citizens will vote (45%) and that federal agents will show up at polling places (44%). Democrats are more concerned about federal agents appearing at polling places, while Republicans are more concerned about voter fraud and non-citizen voting (see Figure 4).

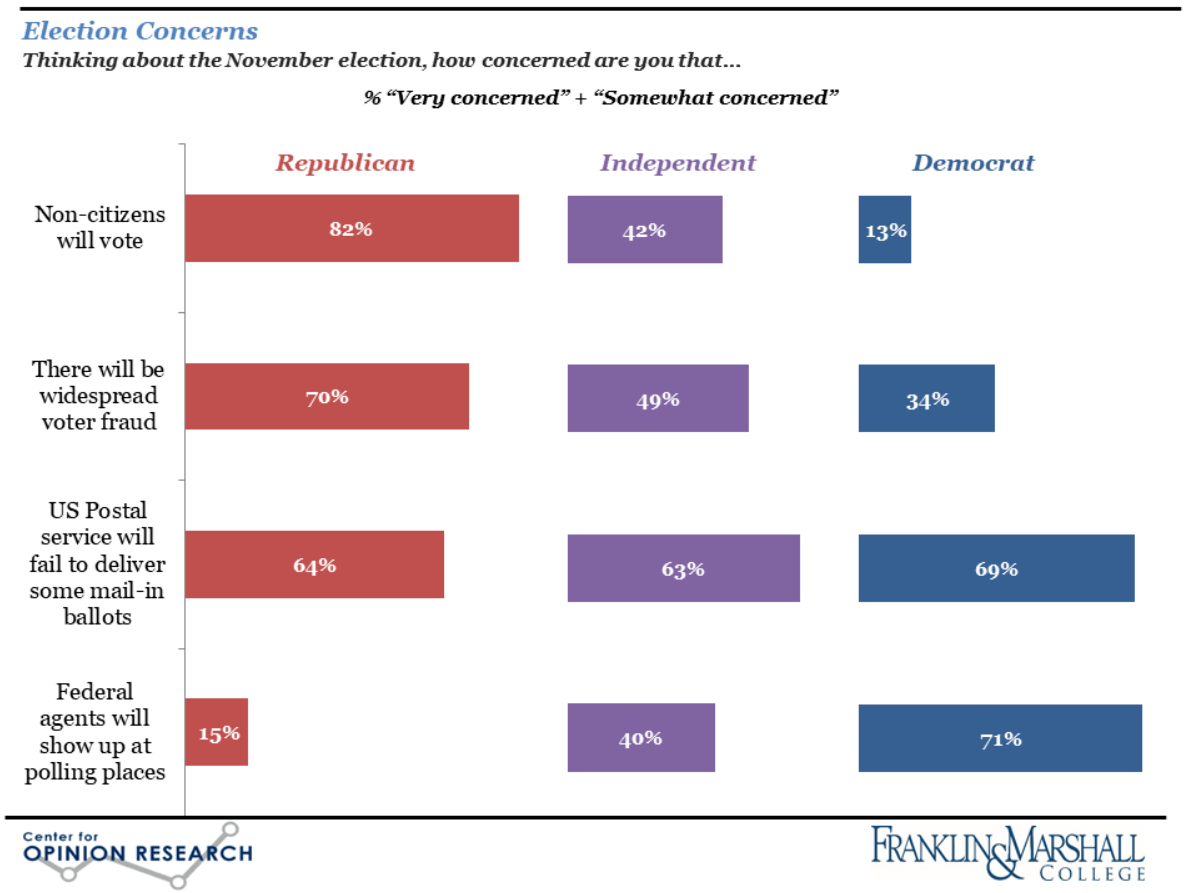

Figure 4. *Concerns about the 2026 Elections by Party*

Presidential Ratings

Fewer voters believe President Trump is doing an "excellent" or "good" job (29%) as president than believe he is doing a "fair" or "poor" job (70%), which is a sizable decline since our October 2025 poll when his positive approval rating was 41%. If President Trump's net approval rating does not rise, his party will enter the midterms with lower presidential approval than any of his predecessors, including his ratings during his first midterm election in 2018 (see Figure 5). About three in five Republicans, one in four independents, and only one in twenty Democrats rate the President's job performance as "excellent" or "good" (see Table A-3). President Trump's positive approval rating among white voters without a college degree (36%) has been declining and is now lower than Governor Shapiro's rating (39%) among this group.

More voters also believe that Trump administration policies have hurt (59%) more than helped (37%) them. Most Republicans (75%) think administration policies have helped them, but few Democrats (7%) or independent (31%) voters believe that (see Table A-4). Republicans' assessments about the personal effects of the president's policies are consequential and are currently related to likelihood of voting. Among the 20 percent of Republicans who say President Trump's policies have hurt them personally, only two in five (39%) are likely to vote. Among the 75 percent of Republicans who believe the president's policies have helped them, three in five (58%) are likely to vote.

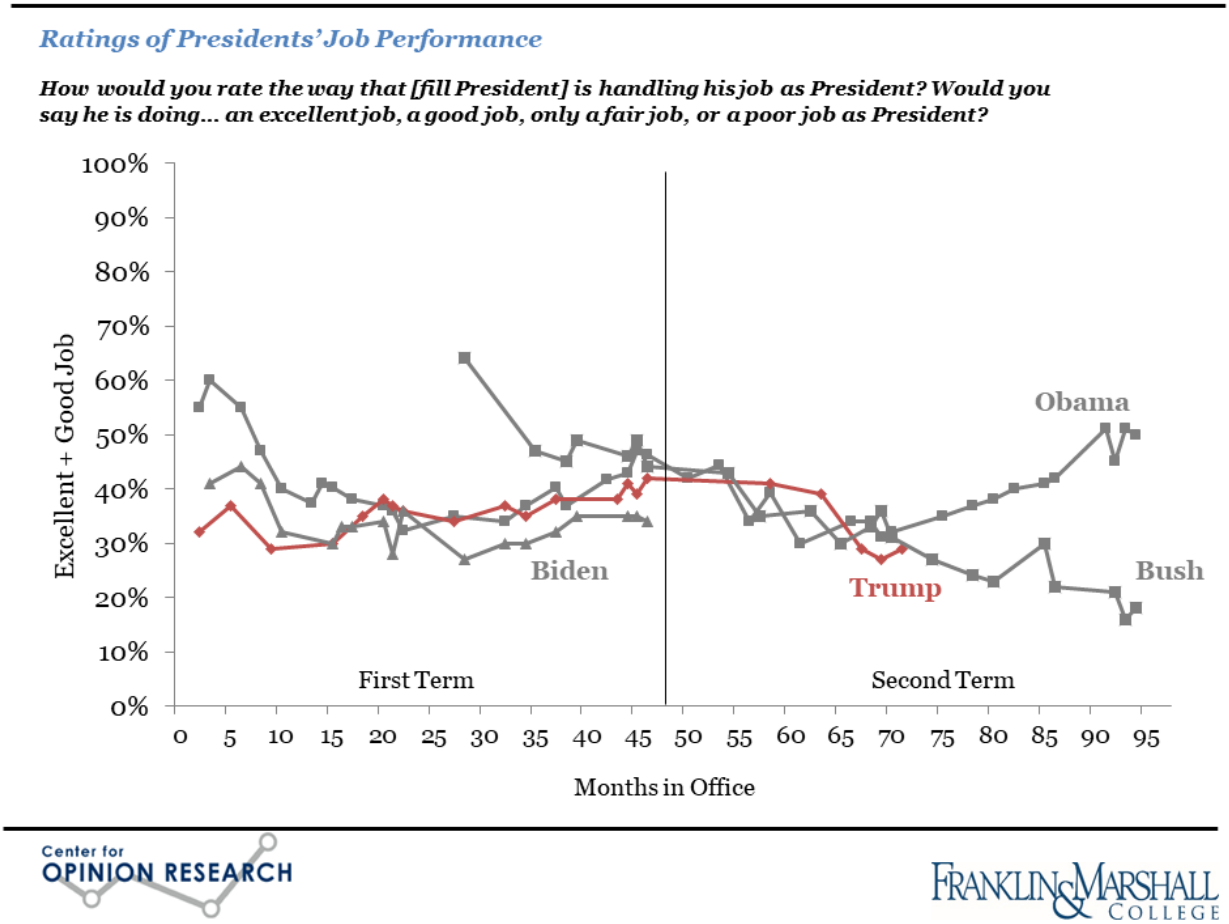

Figure 5. *This figure shows approval ratings among Pennsylvania registered voters for recent presidents in relation to their months in office.*

Democrats currently lead Republicans by 7 points, 48% to 41%, in their preferences for the US House of Representatives. Including those who are uncertain but leaning narrows the Democrats' advantage a bit, 48% to 43%. The Democrats' advantage for US House preference in Pennsylvania is much larger among likely voters, 56% to 42%, reflecting the current higher interest among Democratic voters. Democratic congressional candidates won the 2018 midterm vote in the state by 10 points, and Republicans won the 2022 midterm vote by 5 points.

Table 2 shows a set of political indicators asked during midterm election years that provide a useful framework for thinking about the upcoming midterm races. The survey indicators show that Democrats are in a relatively strong political position at the moment: President Trump's approval ratings are among the lowest of any recent president; Democrats have a sizable advantage on being able to deal with voters' greatest concern, the economy; Democrats lead on preferences for Congress; and Democrats currently have a turnout advantage.

Table 2. Selected Political Midterm Indicators, Pennsylvania

	Oct 2006	Oct 2010	Oct 2014	Oct 2018	Oct 2022	October 2026
Pennsylvania headed in right direction	47%	27%	28%	51%	28%	37%
Most important problem	--	Economy	Education	Government, Education, Economy	Economy, Government Crime	Economy, Government
Presidential job approval rating	Bush:	Obama:	Obama:	Trump	Biden	Trump

State Senate	R (D +1)	R (0)	R (+3)	R (D +5)	R (D +1)	

Methodology

The survey findings presented in this release are based on the results of interviews conducted October 7 - 18, 2026. The interviews were conducted at the Center for Opinion Research at Franklin & Marshall College. The data included in this release represent the responses of 808 registered Pennsylvania voters, including 340 Democrats, 331 Republicans, and 137 independents.[1] The sample of voters was obtained from Aristotle. All sampled respondents were notified by mail about the survey. Interviews were completed over the phone and online depending on each respondent's preference. Survey results were weighted (age, gender, education, geography, vote history, and party registration) using an iterative weighting algorithm to reflect the known distribution of those characteristics. Estimates for age, geography, and party registration are based on active voters within the Pennsylvania Department of State's voter registration data. Gender and education are estimated using data from the November 2022 CPS Voter Registration Supplement.

The sample error for this survey is +/- 4.1 percentage points when the design effects from weighting are considered. The sample error for questions based on subgroups is larger and is +/- 5.6 percentage points for the likely voter sample. An alternative means of calculating the variation in a sample is to take a series of bootstrap samples from the original sample and to use those bootstrapped samples to produce an estimate of sampling error. The procedure involves resampling a data set, calculating a statistic for each bootstrapped sample, accumulating the results of these samples, and calculating a sample distribution. The standard deviation of the mean of

[1] The data reported here is voter REGISTRATION and is consistent with past reporting practices. The survey also asked about self-reported voter IDENTIFICATION, which shows a slightly different partisan split: 43% identify as Republican (n=339), 9% as independent (n=72), 45% as Democrat (n=353) and the balance not offering a response. Partisan comparisons in this summary show self-reported registration.

10,000 bootstrapped samples for President Trump's positive job approval ratings was 1.6%, and 95% of the samples fell within a range of 26% and 33%.

In addition to sampling error, this poll is also subject to other sources of non-sampling error. Generally speaking, two sources of error concern researchers most. Non-response bias is created when selected participants either choose not to participate in the survey or are unavailable for interviewing. Response errors are the product of the question and answer process. Surveys that rely on self-reported behaviors and attitudes are susceptible to biases related to the way respondents process and respond to survey questions.

Note: This poll was supported by a gift from Franklin & Marshall College Alumnus Brett Harwood, Class of '71.

Questions from the Public about our Polling

Q: Do you require your final sample to have specific numbers of people in certain groups, for example, do you use quotas for age, party, or region?

- The Franklin & Marshall College Poll does not use quotas, meaning we do not specify ahead of time how many people from each group is in our sample, although we may do more non-response outreach with groups that are underrepresented in our pool of completes.

Q: What proportion of interviews are conducted by calling cellphones? What are the overall percentages who completed the survey online and by phone?

- The Franklin & Marshall College Poll uses a mixed mode approach, which means that a person can respond over the telephone or online. One-fourth (n=200) of the completed interviews in this poll were completed over the phone. Ninety-eight percent of the telephone completes were identified as cell phones.

Q: Many people complete your surveys online. What measures do you take to make sure they are attentive and real people, not bots?

- We review the responses of every survey participant and compute an attentiveness score for each completed interview, whether completed online or on the telephone. For this survey, attentiveness scoring includes measuring the amount of time the respondent spent in the main body of the survey questionnaire, coding the quality of open-ended responses (did the response relate to the question, was it clear, was it coherent); and computing the total number of missing and don't know responses. One survey was removed from the final data because it had a high number of skipped questions (skipped more than 20 substantive questions) and took too little time to complete the survey (time to complete < 5 minutes).

Q: Do you send any additional mailers or do other reminders to people who don't respond to your postcard invitation? How does non-response affect your surveys?

- The Franklin & Marshall College Poll's outreach to our sample always begins with a postcard mailer. Follow up outreach includes phone calls, emails, and text messages wherever that information is available. We will do up to four phone calls, two texts, and two emails (emails are not available for all respondents). Every respondent in our sample receives a unique ID they must use to complete a survey. We also do some non-response assessment from time to time so that people who care about that can see it (for example, here is an assessment of our 2022 polling), and we always calculate bootstrapped sample error estimates in addition to the traditional estimates.

Q: How do you handle the "someone else" and "do not know" responses for respondents taking the survey online?

- "Other" and "do not know" options appear on screen for the online surveys. "Do not know" is not read to phone participants and isn't included in the online question text but is accepted when offered.

Q: What is Aristotle and what gives you confidence that you have a representative sample?

- The way the Franklin & Marshall College Poll is conducted is sound because we follow best practices in our industry. We draw a random sample of voters from Aristotle, which is a company that many pollsters use to provide their samples (you can read more about them here). We then send a postcard to everyone in our sample letting them know we will be calling them, after which we follow up with phone calls, text messages, and emails depending on what kind of contact information is included for each voter. Survey participants can do the survey over the telephone or complete it online based on whichever

method is more convenient. So we feel confident in the way we gather our data because we encourage participation and offer people lots of opportunities to participate.

Q: What's going on with party identification in your samples? In your subsets it seems like you oversampled Democrats.

- The question about party identification is important. Pennsylvania is one of those states where you need to be registered in a party at least 15 days prior to an election to vote and most voters in the state are registered as either Republicans or Democrats. You can get voter registration figures from the state's web site, which is here. If you go to that page and download the statistics, you will find that 42.3% of the state's active voters are registered as Democrats, 41.5% are registered as Republicans, and the rest (16.2%) are registered with a third party. If you compare the party breakdown in our samples you'll find that it matches those figures, giving us the right partisan balance within our data. We write a lot about partisanship in the state (a list of some of those articles is here). It is worth noting that party registration, which we report, is not necessarily the same as party identification, something explained here.

Q: Many states' polls show different issues being most important to voters. Why are your results different?

- There are many ways to ask about issues. Our approach is simply to ask a question at the beginning of the survey about the most important problem facing the state today. Survey participants can say whatever comes to mind, after which we put their responses into categories. In this and other recent polls, the economy, education, and politicians are at the top of the list. Other pollsters give people lists of issues and ask people to rate each one or to select one issue from their list; it is often these formats that produce responses that differ

from ours. We are not suggesting that one approach is better than the other, just that they tend to produce different results.

Table A-1: Personal Finances

Pennsylvania registered voters, October 2026

We are interested in how people are getting along financially these days. Would you say that you and your family are better off, worse off, or about the same financially as you were a year ago?
