DETAIL

04 **Crosstabs, Q1-Q5**

05 **Bases and margin of error**

06 **Sample profile and methodology**

HOW TO READ THIS REPORT

Every percentage is calculated on the number of respondents answering that question, not the full sample. Each question's base appears in its header.

SMALL BASES

A subgroup marked with an asterisk has a limited respondent base and should be interpreted as directional.

CROSSTAB PAGES

Each question occupies a complete page or page sequence so all demographic columns remain readable.

KEY FINDINGS

Four things this survey shows

01

Georgia Senate Ballot

Jon Ossoff receives 48.2% and Mike Collins 44.4% on the initial ballot, a 3.8-point Ossoff lead. Including leaners: 49.0% to 44.9%, an Ossoff lead of 4.1 points.

02

Collins Favorable

Mike Collins: 44.7% favorable and 41.0% unfavorable, for net favorability of +3.7 points.

03

Ossoff Favorable

Jon Ossoff: 51.4% favorable and 45.8% unfavorable, for net favorability of +5.6 points.

04

Presidential Recall

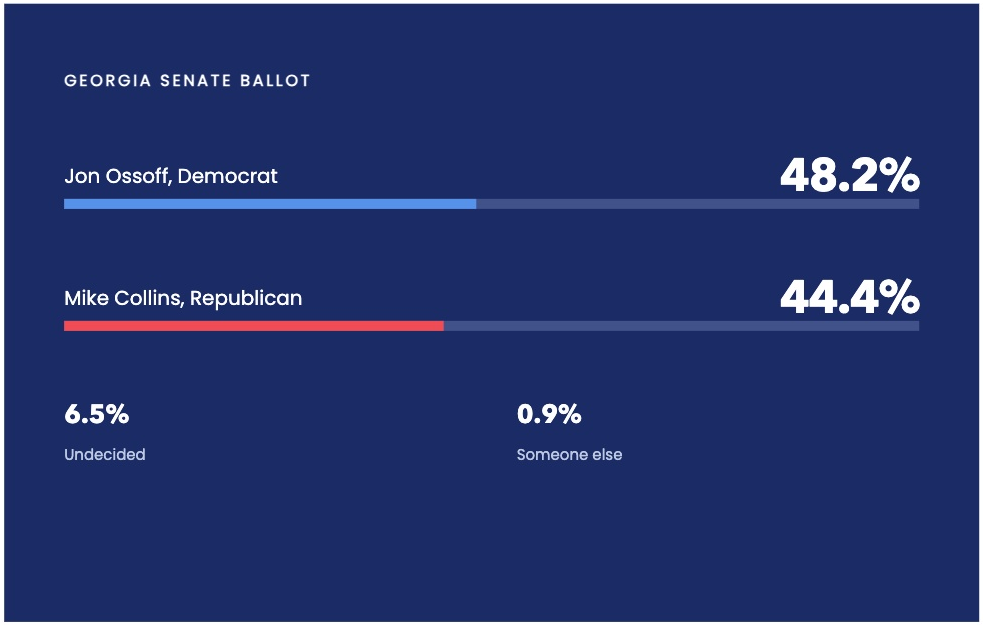

Recalled 2024 vote: Donald Trump 48.5%, Kamala Harris 47.2%. This is respondent recall, not an election-result estimate.

BOTTOM LINE

A weighted snapshot of the electorate. The approximate voter-base MoE is ±4.3 points for a single percentage; it is not the MoE of the difference between candidates.

A close Georgia Senate ballot

Voters-only base 645 | approximate MoE ±4.3%

LEADING MARGIN

+3.8 pts

Jon Ossoff, Democrat holds the advantage in the initial result. Interpret the finding within the survey's reported uncertainty.

METHODOLOGY

How the survey was conducted

664 Respondents - 645 Likely Voters | Field dates: September 14-16, 2026

REPORTING N	ANALYTICAL VOTER BASE	DESIGN EFFECT	MARGIN OF ERROR
664	645	1.24	±4.3%

Interview disposition: 664 respondents; 19 reporting they would not vote were excluded, leaving an analytical voter base of 645.

POPULATION AND WEIGHTING

Quantus Insights reports results on a study reporting base of N=664, with an analytical voter base of n=645, representing likely voters. Respondents were contacted through SMS invitations sent to mobile phones. Results were weighted using iterative proportional fitting (raking) to supported population benchmarks for Sex, Age range, Education (modeled), Metro type, Media market, Race / ethnicity (reported).

WEIGHTS AND UNCERTAINTY

Using the reported design effect of 1.24, the 645-voter base has an effective sample of approximately 520 and an approximate 95% margin of error of ±4.3 percentage points near 50%.

RESPONSE BASES

Each question uses its own available-response base, and blank or skipped answers are excluded from that question. Conditional follow-up questions are identified separately, and the full-sample margin of error is not applied to those results.

BALLOT REPORTING

Initial-ballot results and any combined ballot with leaners are presented as separate findings.

Percentages may not total 100% due to rounding. An asterisk marks a displayed subgroup base below 150; interpret these results as directional.
