

Polling, Insights, and Campaign Strategy

QuantusInsights.org | @quantusinsights on X
Authorized by Jason Corley, Co-founder

Methodology Summary
Sample: 624 registered-likely voters | Fielded September 9–12 | Published September 15, 2025 | State of Georgia
Mode: Mixed-mode approach using opt-in online panels and SMS outreach to improve demographic and geographic reach
Margin of Error: ±4.3% at 95% confidence | Sponsor: Quantus Insights Funded

Weighting & Adjustment
Propensity Modeling: Logistic regression used to estimate and correct for sampling bias based on demographics, vote history, and partisan registration
Raking (IPF): Calibrated to U.S. Census and voter file benchmarks on Multilevel Poststratification (MPS): Adjusted complex intersections (e.g., race × age, gender, race/ethnicity, education, region, and party ID
education × region) using validated subgroup targets (e.g., white non-college men)
Internal Cell Calibration: Benchmarked subgroup party splits and corrected internal misalignments
Weight Normalization: Trimmed to reduce design effects
Min: 0.368165 | Max: 3.012782 | Mean: 1.000000 | SD: 0.381973
Kish DEFF: 1.146 | Effective N: 544.5 (of Qualified N = 624)
Validation & Quality Control:
- Benchmarked against Aristotle voter file data for turnout patterns and partisan alignment
- Included attention-check items, straight-lining detection, and response time filters
- Cross-validated results with recent probability-based state-wide surveys for external accuracy

Post-Election Context:
- This wave is a sentiment survey of registered voters with no likely voter screen
- Designed to capture voter attitudes and approval dynamics for upcoming state-wide election
- Results reflect calibrated, weighted opinion snapshots grounded in voter file alignment and rigorous demographic balancing

This methodology reflects Quantus Insights' commitment to rigorous, transparent polling. By combining advanced weighting, behavioral modeling, and voter file calibration, we aim to produce accurate, representative snapshots of public opinion—grounded in both performance and academic best practices.

What It All Means – Georgia Senate 2026

Ossoff is vulnerable: Nearly half of voters say it's time for a change; his approval is tepid and anchored by frustration over the economy and illegal immigration.

Economy dominates: Cost of living (53%) is the top issue, with groceries, housing, and taxes hitting hardest. GOP challengers who lead with an economic message are best positioned.

Republican field unsettled:

- Collins shows the strongest early footing.
- Carter remains competitive.
- Dooley has viability but must build electability perception.
- Most voters are still unsure who can beat Ossoff. The electability argument is wide open.

Immigration resonates: Broad majority support tougher enforcement, including deportations and the Laken Riley Act. This is a clear GOP advantage.

Independents are key: High undecided rates among independents mean they'll decide the race; they are dissatisfied with Ossoff but not yet sold on a Republican.

Trump factor: GOP voters split between loyalty and independence. The nominee must balance both to consolidate support.

Bottom Line: Ossoff can be beaten in 2026, but Republicans need to define a clear, electable challenger, frame the race around the economy, crime, and immigration, and consolidate undecideds, especially independents.

How We Performed in 2024

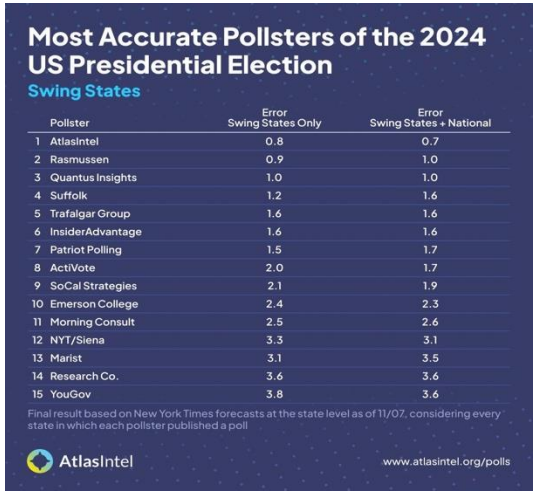

When accuracy mattered most, we delivered.

In October, our polling averaged just a 1-point error across the Rust Belt and national surveys. Our final national numbers showed Trump at 49.1% and Harris at 48.3%. The actual result? Trump 49.8%, Harris 48.3% — just a 0.7-point miss.

Independent observers took note.

AtlasIntel ranked us among the most accurate pollsters at the national level and in swing states for 2024. Activote placed us in their Top 20 Most Valuable Pollsters out of more than 120 firms.

We measure reality. And we've earned trust by getting it right.

Most Accurate Pollsters of the 2024 US Presidential Election

Swing States

	Pollster	Error Swing States Only	Error Swing States + National
1	AtlasIntel	0.8	0.7
