Texas Statewide Survey

October 2026

Survey Information

631 Likely Voters
Texas
10/23/2026 – 10/27/2026
MoE: ±4.9pp
Sponsor: N/A

Methodology

Respondents were recruited through an online, opt-in panel conducted in English. Weighting targets reflect population benchmarks synthesized from Census data and exit polls. A statistical model was fitted on age, sex, race, education, party identification, and recalled 2024 vote to produce subgroup-level estimates. Results are rounded to one decimal place. Margin of error is reported at the 95% confidence level, calculated using the effective sample size after accounting for the design effect.

Small area projections are model-based estimates produced by reweighting this survey's results to the demographic and political composition of smaller geographic units, not a reflection of separate per-area survey data. Small areas carry relatively high uncertainty and are best interpreted as directional.

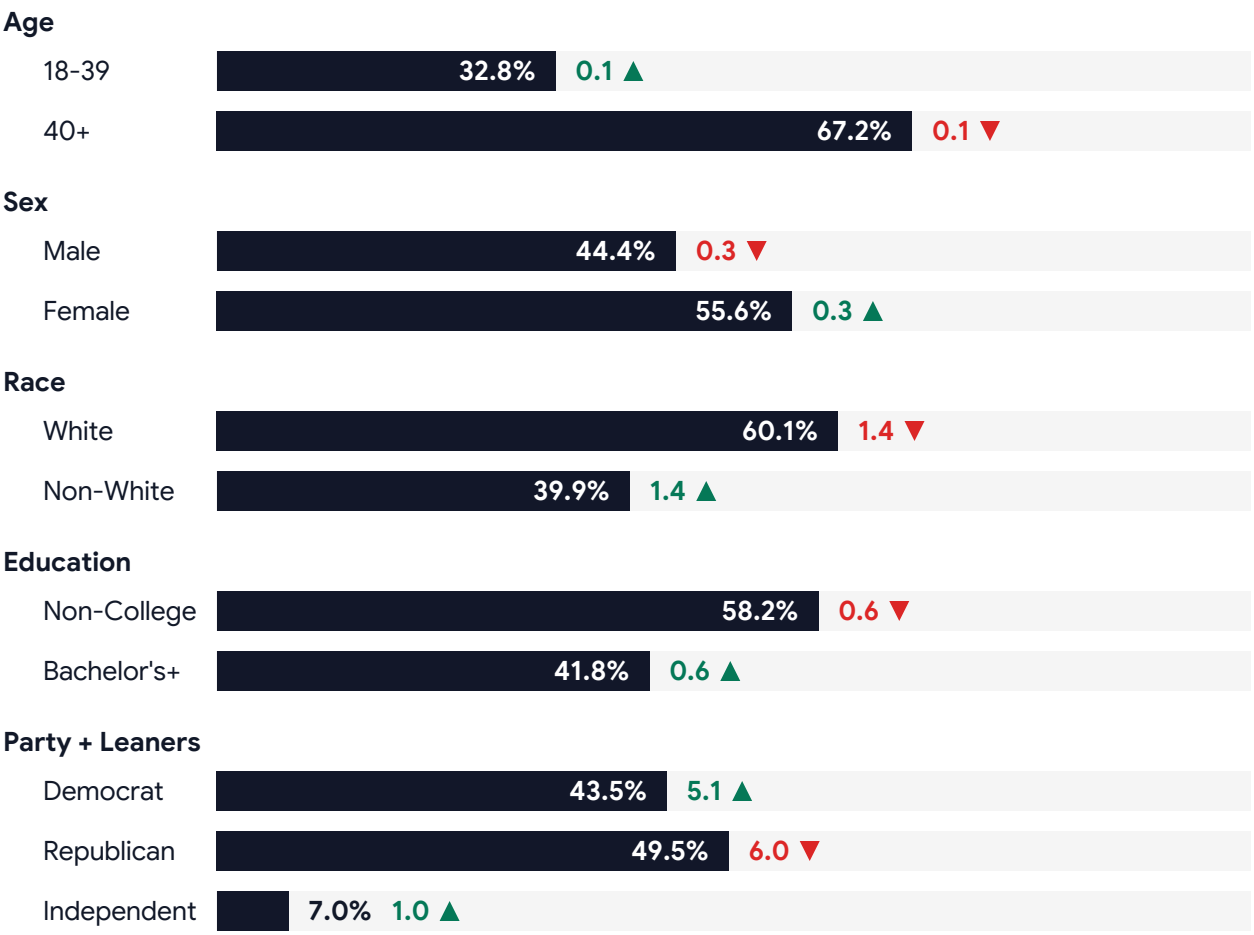

Calibration cannot fully account for unobserved differences between respondents and nonrespondents. Subgroup margins of error are larger than that of the overall sample. More information is available to interested parties upon request.

Further Information

A2 Insights is a nonpartisan public opinion research firm based in Ann Arbor, Michigan, and a member of the American Association for Public Opinion Research (AAPOR). For inquiries, please contact Andrew Kim at **andrew@a2insights.org**.

Turnout Model

Estimated composition of the general electorate in this survey's location and per-group shifts from 2024.
