UNF Poll shows dead heat in race for Florida governor

Moody in slim lead for Senate

Jacksonville, Fla. –A new poll of 1,471 likely midterm election voters in Florida from the Public Opinion Research Lab (PORL) at the University of North Florida shows razor thin leads for Republican candidates in the Governor and Senate races. Poll results show gubernatorial candidate Byron Donalds ahead of David Jolly by just two percentage points, and Ashley Moody with a four-point lead against Angie Nixon for U.S. Senate. These margins have narrowed notably since PORL's July poll, which had Donalds up by five points and Moody up by eight.

When it comes to the election for Florida governor, 49% indicated a vote for Republican Byron Donalds, and 47% said they would vote for Democrat David Jolly. Four percent of respondents were undecided. These figures include "leaners," or those who initially said they did not know, but then chose one candidate or another upon further probing. Support for each candidate falls largely along party lines, however 11% of registered Republicans indicated a vote for Jolly, while just 5% of Democrats said they would vote for Donalds. Jolly is 16 percentage points ahead of Donalds among Independents.

"Though Donalds enjoys a slight advantage, these numbers suggest a competitive gubernatorial race, similar to the race between Andrew Gillum and Ron DeSantis in 2018, which was won by less than a percentage point. Given the margin of error, a win by either candidate would be unsurprising," commented Dr. Sean Freeder, PORL faculty director and political science professor. "This increased competitiveness can primarily be attributed to national-level effects – midterm elections are generally difficult for the party of the president, especially given Trump's near-historic low approval ratings. Furthermore, Donalds' attempt to win over Black voters does not appear to be working, as Donalds receives just 10% of their support, only slightly more than Senator Moody's 9%, despite not engaging in nearly as much effort."

Respondents were then asked which gubernatorial candidate they trust more on a few different issues important to Florida voters. When it comes to data centers, 41% said they trust David Jolly more, and 37% said Byron Donalds. Respondents were roughly split on affordability and cost of living, Donalds with 42% and Jolly with 43%. More respondents expressed trust in Byron Donalds when it comes to property insurance at 43%, compared to 38% for Jolly. Unsurprisingly, the overwhelming majority of each candidate's supporters trust that candidate most in each of the three issue areas; however, there was some crossover in the areas of data centers and property insurance. Seven percent of Jolly supporters trust Donalds more on insurance, and an equal percentage of Donalds supporters trust Jolly more on data centers.

When asked their vote choice for U.S. Senator from Florida, including leaners, 49% said they would vote for Republican incumbent Ashley Moody, and 45% indicated support for Democrat Angie Nixon. Five percent were undecided. Similar to the governor's race, 10% of registered Republicans indicated support for Nixon, while 8% of Democrats said they would vote for Moody. Independents prefer Nixon by 15 percentage points.

Respondents were then asked how messaging about each candidate from opposing campaigns impacted their vote choice. Overall, 25% of respondents said that Republican campaign messaging around Angie Nixon's ties to the Democratic Socialists of America organization made them less likely to vote for her, 12% said more likely, and 55% said it did not affect their vote choice. Among her supporters, however, just 6% reported a negative effect, 23% indicated a positive effect, and 67% said no change.

Respondents were also asked how Democrats' messaging about the Hope Florida grand jury report linking Ashley Moody to the misappropriation of public funds for political purposes affects their vote choice. Of the total sample, 30% said it made them less likely to vote for Moody. Fifteen percent of Moody's supporters said the messaging had a negative impact, 14% positive, and 64% reported no change. Among Independents, Hope Florida had a greater negative impact on Moody votes with 38%, compared to 25% for Nixon and Democratic Socialism.

"Like Donalds, Moody appears to be in a competitive race, though one that leans more decisively in her favor. Independents favor Nixon by 15 points, and also appear to be more concerned about Moody's ties to Hope Florida than Nixon's ties to socialism," commented Dr. Freeder. "Given the anti-incumbent mood of swing voters, both Donalds and Moody's success depends upon Republicans not falling too far behind Democrats in terms of turnout and enthusiasm."

After the Governor and Senate vote choice questions, all respondents were asked whether they strongly or somewhat support their chosen candidate in each race. In the Governor's race, 77% of Donalds voters said they support him strongly and 18% somewhat. Jolly voters were slightly less supportive of him, with 67% saying strongly and 24% somewhat. When it comes to the Senate race, 79% of Moody's supporters said they do so strongly, compared to Nixon's 75%.

"Both Donalds and Moody enjoy a small but real enthusiasm gap among their voters," said Freeder. "This is perhaps understandable given that former Republican Jolly may be less appealing to Democratic voters further to the left, and leftist Nixon may alienate moderate Democrats with her positions on the economy and Israel. It's possible one candidate may be helping the other by giving each wing of the party at least one major candidate to feel enthusiastic about, therefore driving up Democratic turnout."

Respondents were also asked how they would vote on Amendment 3, titled "Increased Homestead Exemption; Lower Cap on Increases in Non-Homestead Property Assessments." Due to the length and complexity of the ballot language, the amendment was further summarized to accommodate the limitations associated with conducting a survey over the phone. Respondents were told the title of the amendment, and that "it would increase homestead property tax exemption over time, other than those directed to schools." Fifty percent of respondents indicated they would vote "yes," ten percentage points short of the 60% supermajority required to pass. Thirty percent said they would vote "no," and a notable 14% said they do not know how they will vote on the amendment. Support is greater among registered Republicans than Democrats or Independents, but is not cleanly split across party lines, with 32% of Democrats indicating a "yes" vote and 23% of Republicans voting "no." While votes in favor of the amendment are roughly equal across categories, there is greater opposition to the amendment among respondents who have lived in Florida longer than those who are new to the state.

"This appears to be another tight race that will ultimately depend upon which way last-minute undecideds swing," added Dr. Freeder. "Most of these voters would need to vote yes in order to put Amendment 3 above 60%, a challenging but possible outcome. Political science research shows that it's easier to use messaging to persuade voters on policy more than on candidates, so the last-minute advertising by each campaign could make a big difference."

Finally, respondents were given two statements regarding the priorities of state and local officials, and asked which comes closer to their view. Sixty-one percent of respondents said they think protection of the environment should be given priority, even at the risk of curbing economic growth and development, while 26% said economic growth and development should be given priority, even if the environment suffers to

some extent. A majority of registered Democrats (78%) and Independents (62%) said they most align with environmental protection over economic growth, along with a large portion of Republicans (48%). More recent Florida transplants tend to be more in favor of economic growth and development, while those who have lived in Florida longer lean toward environmental protection.

"We find positions on issues like taxes and development versus environment are more traditionally Republican-leaning among those who have moved to Florida in the last ten years compared to those who have lived here longer," commented Dr. Freeder. "Despite a belief by some that transplants from other states make the state more blue, this data suggests instead that newcomers may actually be driving Florida's recent status as a solidly red state."

Overall, the findings of this poll suggest close races for governor and Senate, in which turnout will play the key role. "Polling ultimately can't tell us with certainty what turnout will end up looking like," Dr. Freeder cautioned. "Particularly strong turnout by Democrats would make Jolly slightly favored, and Nixon more competitive; on the other hand, if Republicans are more enthusiastic than expected, Moody and Donalds could have more comfortable victories."

Methodology

The UNF PORL Florida Statewide Poll consists of a random sample of 1,471 likely Florida midterm voters, and was conducted from October 12 through 19, 2026, by the Public Opinion Research Lab (PORL) at the University of North Florida. The sampling frame, consisting of phone numbers, was sourced from the September 2026 update of the Florida voter file. A voter was considered "likely" if they voted in at least one of the 2020, 2022, or 2024 general elections. A proportional number of new registrants were also included in the sampling frame. Respondents who said they would "probably not" or "definitely not" vote in the 2026 midterm election were screened out of the survey. To ensure a representative sample, the 10 Florida designated media market areas (DMAs) were stratified by geography and urbanicity into 18 different strata, with Miami-Dade County separated into its own stratum due to its unique population. Surveys were conducted in English and Spanish.

Respondents were contacted by live interviewers via telephone between 12 to 9 p.m. seven days a week, with up to five callbacks attempted. Telephone data collection took place at the PORL facility with its 40-station Computer Assisted Telephone Interviewing (CATI) system. A single interviewer, through hand dialing, asked for the listed voter by name. If they reached the wrong person, the listed voter was not available, or the listed voter no longer lives in Florida, the interview was terminated. The response rate of this study was 5.4%, using the American Association of Public Opinion Research (AAPOR) Response Rate 3 (RR3) calculation.

All data are weighted in two steps: first by educational attainment, and then by partisan registration, age, race and ethnicity, sex, and geography to match the population of voters in the 2022 general midterm election, adjusted for changes to the electorate. Geographical strata, party registration, sex, race and ethnicity, and age weights were calculated using their respective proportions in Florida Voter File, and vote choice was calculated using election result data from the Florida Division of Elections. Education weights were calculated using the Census Bureau's American Community Survey (ACS) 2024 five-year estimates for individuals 25 years of age and over, with those under 25 receiving an education weight of one. All weights are calculated and applied using the SPSS version 30 rake weighting function, and assigned a weight of one if any weighting variables are missing. The overall margin of sampling error is +/-2.81 percentage points, including estimated design effect due to weighting. Estimates for smaller subpopulations have greater margins of error, indicating greater uncertainty in the data. It is important to note that sampling error is just one of many potential sources of error. This and all other public opinion

research are susceptible to unmeasured, real-world error. The research presented in this release was self-funded by PORL.

About PORL
The Public Opinion Research Lab (PORL) at the University of North Florida is an independent, non-partisan full-service survey research facility. Our top priority is to produce reliable, unbiased data through carefully executed research of the highest caliber of academic integrity. PORL opened in 2001 and is a charter member of the American Association for Public Opinion Research Transparency Initiative, and a member of the Association of Academic Survey Research Organization. As members of AAPOR, PORL's goal is to support sound and ethical practices in the conduct of survey and public opinion research. For more information, visit unf.edu/coas/porl or contact Dr. Sean Freeder at porl@unf.edu or (904) 620-2784.

About University of North Florida
The University of North Florida is a nationally ranked university located on a beautiful 1,381-acre campus in Jacksonville surrounded by nature. Serving more than 18, 900 students, UNF features six colleges of distinction with innovative programs in high-demand fields. UNF students receive individualized attention from faculty and gain valuable real-world experience engaging with community partners. A top public university, UNF prepares students to make a difference in Florida and around the globe. Learn more at www.unf.edu.

There are several proposed amendments to the Florida Constitution which will appear on the 2026 ballot. Amendment 3 is titled "Increased Homestead Exemption; Lower Cap on Increases in Non-Homestead Property Assessments."
It would increase homestead property tax exemption over time other than those directed to schools. If the election were held today, would you vote yes or no on this amendment?
