Klobuchar Remains 7 Points Ahead of Demuth for MN Governor, as Other DFL Candidates Gain Back Some Ground, But 3 Key Races Remain Tight:

One month after showing Republican candidates on the upswing and 3 weeks until Election Day, SurveyUSA's latest exclusive polling for KSTP-TV Minneapolis, KAAL-TV Rochester, and WDIO-TV Duluth finds DFL candidates regaining the lead (if only nominally) in three contests, widening a lead in another, and holding steady in the fifth polled contest.

In the election to replace Tim Walz as Governor , DFL candidate Amy Klobuchar today is at 48%, Republican Lisa Demuth at 41% – both up one point from last month's tracking , leaving Klobuchar's 7-point lead unchanged. Green Party candidate Steven Young remains at 3%; undecideds dip from 9% to 8%. Demuth now leads by a nominal point among men, up from a one-point deficit, while Klobuchar widens her lead among women from 14 to 17 points. 86% of Republicans vote for Demuth; 90% of Democrats vote for Klobuchar; independents give Klobuchar a 3-point advantage, 42% to 39%. While it's close among independents, moderates continue to strongly back Klobuchar, though by a narrower 23-point margin than the 31 to 32 point margin seen in previous polling .

In the contest for the US Senate currently held by Tina Smith, DFL candidate Peggy Flanagan gains back 3 points and Republican Michele Tafoya holds steady month-on-month , giving Flanagan the edge, 45% to 42%, with 2% each voting for one of the third-party candidates in the race and 9% undecided. Tafoya was at 41% in August, at 42% in both September and today; Flanagan was at 46% in August, 42% last month, and at 45% today. Tafoya leads by 5 points among men, Flanagan by 11 points among women – a 16-point gender gap. Independents here favor the Republican by a 5-point margin, down from 14 points last month, while moderates again prefer the DFL candidate, here by 11 points, down from 15 . Tafoya's lead in rural parts of the state has risen from 19 points to 35 points; that's offset by Flanagan's urban advantage increasing from 6 points to 37 and a modest improvement for the DFL candidate in the suburbs.

Any outcome remains possible in the very close and recently quite bouncy race for Attorney General , where incumbent DFL candidate Keith Ellison today is back in the lead, though nominally, with 45% to Republican Ron Schutz's 44%. One month ago , Schutz led by 2 points; two months ago, the candidates were tied; prior to that, during the primary season, Ellison was consistently ahead by margins of 7, 4, and 8 points. Today, Schutz leads by 10 points among men, Ellison by 12 among women, a gender gap of 22 points, notably wider than the 12-point gap seen last month. Voters under age 50 favor Ellison by 10 points, up from 7 points last month; those 50+ back Schutz by 8, down slightly from 9 last month. Ellison appears to be making inroads among independents , where he had trailed by 10, now trails by 6 – while Schutz has done the same with moderates , where he trailed by 14 points last month but by 8 today.

Both the Republican challenger and the DFL incumbent Secretary of State have gained ground in the Secretary of State contest, where Steve Simon (DFL) now leads Tad Jude (R) by 6 points, 43% to 37%, with 3% voting for Libertarian George "Chip" Tangen and 2% for Green Party candidate Seth Kuhl-Stennes; 15% are undecided, down from 20% in September. Simon is up 3 points, Jude up 1. Simon has a consistent 10-point lead among voters under age 50, while those 50+ effectively remain tied , with Simon one nominal point ahead. Independents and moderates both favor Simon here, by margins of 6 and 20 points respectively.

Finally, in the race for State Auditor , where last month Republican Scott Jensen was 7 points atop DFL candidate Zack Filipovich, today Filipovich is a nominal point ahead of Jensen, 41% to 40%, with 5% voting for Forward Independence candidate Jay Reeves and 14% undecided. Filipovich has widened his lead among women from 3 points to 9, and reduced the gap among men , where he had trailed by 15, now trails by 7. Moderates here favor the DFL candidate, by 16 points, up from 7 points in September; among independents, Jensen had led by 13 , but today the contest is tied.

Some month-on-month changes to the list of most important issues offered to voters produce no changes in the three that most matter – the only three with double-digits selecting them as the most important to their votes this year. 36% say inflation / the cost of living / gas prices is most important to their vote (gas prices, a standalone issue last month, is now combined with these related topics); those voters choose the DFL candidate in each contest, by margins ranging from 23 to 39 points. The 18% who say fraud is the most important issue consistently favor the Republican, by margins ranging from 75 to 87 points. 11% choose healthcare as the most important issue; these voters back the DFL candidate in each race, by margins of 37 to 46 points.

Fully crosstabbed results follow.

About the Research / Filtering: SurveyUSA interviewed 900 adults from the state of Minnesota 10/08/26 through 10/12/26 using nonprobability sample of internet panel members provided by Cint USA. Of the adults, 818 were identified as being registered to vote; of the registered voters, 718 were identified as being probably or definitely likely to vote in the November general election and

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted "mixed-mode" (or "multi-mode"): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent's cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent's phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, "sampling error" is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principles of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
